EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Brian C. Cholewa on 10/4/2006.

3. IN THE CLAIMS:

--1. (Currently amended) A transgenic plant comprising in its genome a transgene comprising a [sense] FPA polynucleotide sequence in sense orientation, [which causes the plant to have an earlier flowering time as compared to non-transgenic plants of the same species,] wherein the FPA polynucleotide [encoding] encodes a protein [having] comprising SEQ ID NO:3, wherein expression of the transgene is sufficient [alone] to cause the plant to flower earlier as compared to other plants of the same species without the transgene.--

--5. (Currently amended) A transgenic plant comprising in its genome a transgene comprising a [sense] FPA polynucleotide sequence in sense orientation, wherein expression of the transgene [that] causes the plant to have an earlier flowering time as compared to non-transgenic plants of the same species, wherein the FPA polynucleotide sequence is SEQ ID NO:2.--

Art Unit: 1638

--8. (Currently amended) A plant comprising in its genome a genetic construct comprising [a sense] an isolated FPA polynucleotide sequence in sense orientation, wherein [the] expression of the sequence in the plant causes an earlier flowering time of the plant as compared to non-transgenic plants of the same species, wherein the FPA polynucleotide is SEQ ID NO:2.--

16. (Currently amended) A plant seed comprising in its genome a genetic construct comprising [a sense] an isolated FPA polynucleotide sequence operably linked to [and] a plant expressible promoter in sense orientation, [which promotes expression of the FPA polynucleotide sequence in a plant,] wherein the FPA polynucleotide [encoding] encodes a protein [having] comprising SEQ ID NO:3, and wherein expression of the sequence in the plant causes an earlier flowering time of the plant as compared to non-transgenic plants of the same species.--

--21. (Currently amended) A transgenic plant cultivated from the seed of claim 16, wherein the plant comprises the genetic construct.--

--24. (Currently amended) An isolated DNA [sequence] molecule comprising a DNA sequence encoding the FPA protein from *Arabidopsis thaliana*, wherein the protein [having] comprises SEQ ID NO:3.--

--26. (Currently amended) A method of producing a transgenic plant with an earlier flowering [characteristics] time comprising: [the steps of] constructing a genetic construct

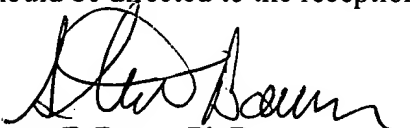

Art Unit: 1638

comprising a plant expressible promoter [and] operably linked to an FPA polynucleotide sequence in sense orientation, wherein the FPA polynucleotide [having] comprises a coding region that encodes a protein [having] comprising SEQ ID NO:3, introducing the genetic construct into a plant cell, regenerating a plant from the plant cell, selecting a plant [that has received a copy of the] comprising the genetic construct, and growing the plant under conditions that allow expression of the FPA gene such that the plant flowers earlier than plants of the same species without the genetic construct.--
